Rack Integration Services

Why waste another minute going live. Deploy faster with our fully integrated and tested custom rack solutions. From procurement to delivery, our expertise and partnerships are here for you.

Converged Racks Designed, Integrated, and Deployed

Lower deployment costs, simplify managment, and reduce maintenance and support with a fully designed, integrated, and deployed solution. Get optimal performance and reliability with the right mix of compute, storage, and networking, all fully validated and tested.

Custom OS and Software Provisioning

At the center of business today is rock-solid IT. Increase productivity and free up valuable resources by off-loading a custom OS deployment with fully provisioned software installation. Our installations are specifically tailored to your IT application, no matter how niche.

Cluster Management Services

Eliminate complexity and enable flexibility with a cluster management software solution that automates the process of building and managing high-performance clusters. Get the most out of your business products with fully set up and provisioned software that dynamically allocates resources, monitors, and automates corrective actions.

Asset Tracking, Management and Custom Labeling

Asset tagging lets you streamline the monitoring, managing, and inventory control of your IT infrastructure with easy-to-use barcode labels. This effective asset management solution is designed to help you manage risk across your IT or Data Center environment.

Functional and Platform Testing

Your critical infrastructure needs to be rock solid. Our pre-production testing checks both hardware and software functionality and reliability from client-side to server-side to verify internal operations product specification, all specifically tailored to your needs.
